CAPABILITIES STATEMENT

PROVEN MEDICAL TECHNOLOGY FOR AUSTERE CRITICAL CARE

Thornhill Medical is transforming the delivery of critical care in austere and unpredictable combat casualty care, emergency and humanitarian environments. Thornhill Medical collaborates each day with customers, innovation leaders, industry, hospital, and military partners around the world to push the boundaries of what's possible and save lives.

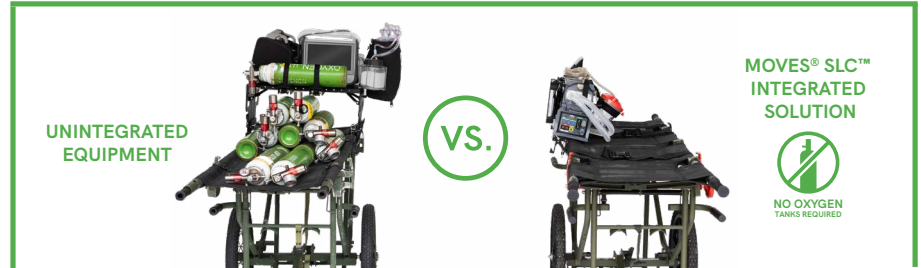

CORE & DISTINCTIVE COMPETENCIES

Marking 20 years in 2024 as a global innovator in respiratory and oxygen-related scientific research and advanced technologies, Thornhill Medical's flagship technology, MOVES® SLC™, and its companion anesthesia solution, MADM™, are solving critical care capabilities gaps to save lives around the world. These small, light-weight, feature packed solutions are specifically designed to bring advanced critical care and anesthesia as far forward as possible for mobile, agile and self-sufficient care delivery.

SOLUTIONS. FUTURE READY. TODAY.

MOVES® SLC™

Warfighters and Health Service Support (HSS) resuscitation/surgical and evacuation providers can count on **MOVES® SLC™** to support the complexities of the current and future battlefields. Using micro technologies, **MOVES® SLC™** integrates multiple discrete devices (vital signs monitors, suction, oxygen generation and ventilation) into a single, rugged, compact, lightweight, energy and resource efficient, portable device. This integration significantly reduces logistics burdens with a substantial decrease in weight and cube when compared with a piecemeal equipment approach. FDA and CE approved and MIL-STD-810H, TRL 9, USAARL/JECETS airworthiness evaluated. **MOVES® SLC™** fits on a standard NATO litter and supports HSS providers in any environment, on many ground/air transport platforms in all contingency operations. Developed in partnership with multiple DOD laboratories.

MADM™

A portable in-line vapor anesthesia delivery device that turns any ventilator into an anesthesia workstation instantly delivering gas anesthesia, safely and accurately. **MADM™** integrates as a module seamlessly with the **MOVES® SLC™**. Designed to support austere, challenging field environments with small, lightweight footprint, ideal for Forward Surgical Teams and Field Hospitals providing Damage Control Surgery services.
